

**Amendments to the Specification**

Please replace the paragraph at page 10, lines 1 through 8 with the following amended paragraph:

---

A) Another approach is to make delivery choices based on a broader nature of the content, such as file type. It is recognized that certain file types may be more demanding of bandwidth [[and]] than other file types. For example, a script generally has very little content - it commands software already on the computer 40 to perform a predefined function. Text content may also be less bandwidth intensive, whether the text is provided as part of a HyperText Markup Language (HTML) file, an electronic mail message, or a short message. In contrast, streaming audio and video content can be assumed to be very bandwidth intensive.
